

ROHIT BHATT

Full Stack Software Engineer | Backend & AI Engineering

Hyderabad, India | +91 7017081199 | rohit.bhatt.dev@gmail.com

LinkedIn: [linkedin.com/in/rohitbhatt-dev](https://www.linkedin.com/in/rohitbhatt-dev) | GitHub: github.com/rbhatt1999 | Portfolio: rohitcodes.com | Medium: medium.com/@rbhatt199924

PROFESSIONAL SUMMARY

Full Stack Software Engineer with 5+ years of experience designing, building, and scaling production applications using Ruby on Rails, React, JavaScript, Next.js, and PostgreSQL. Backend-heavy specialist in REST API design, database optimization, and distributed systems with Sidekiq-based asynchronous processing. Proven track record integrating Large Language Models (LLMs) — Anthropic Claude and Google Gemini APIs — into production workflows, including AI-driven adjudication pipelines, prompt engineering, structured outputs, and token-cost optimization. Strong in test-driven development (TDD) with RSpec, AWS cloud deployments, and shipping high-impact features across cross-functional product, design, and engineering teams.

TECHNICAL SKILLS

- **Languages:** Ruby, JavaScript, Python, SQL, HTML5, CSS3
- **Backend:** Ruby on Rails, Node.js, Flask, REST APIs, Sidekiq, Pundit (Authorization), RSpec, Test-Driven Development (TDD), Background Jobs, PostgreSQL Advisory Locking
- **Frontend:** React, Redux, Next.js, Tailwind CSS, Ant Design, Server-Sent Events (SSE), Responsive UI
- **Databases:** PostgreSQL, MySQL, JSONB, SQLAlchemy, Query Optimization, Indexing, Schema Design
- **AI / LLM Engineering:** Anthropic Claude API, Google Gemini API, LangChain, LLM Integration, Prompt Engineering, Retrieval-Augmented Generation (RAG), AI Agents, Structured Outputs (Pydantic), Token Usage Optimization, Claude Code
- **Cloud & DevOps:** AWS, Capistrano, Heroku, CI/CD, Git, GitHub
- **Analytics & Tools:** Metabase, Chrome DevTools, Postman, OAuth 2.0

PROFESSIONAL EXPERIENCE

Ekincare

Hyderabad, India

SDE II — Full Stack Engineer (Ruby on Rails, React) December 2024 – Present

- Architected an AI-driven insurance claim adjudication platform (Claim Mate), integrating Anthropic Claude and Google Gemini LLM APIs; designed JSONB-backed PostgreSQL schemas (ai_claim_status, ai_response_data) and Sidekiq job pipelines with PostgreSQL advisory locking for fault-tolerant retry logic on long-running LLM workflows.
- Built end-to-end React UI for AI recommendation display, adjudicator review workflows, and feedback collection modals; shipped a Metabase analytics dashboard tracking LLM token usage and cost across Claude and Gemini APIs through normalized JSONB queries.
- Designed a Linear Programming-based optimization engine to compute optimal SKU pricing combinations in real time, reducing package cost calculation from seconds to milliseconds.

- Audited the financial ledger system, identified critical data inconsistencies, and shipped fixes that delivered cost savings worth multiple lakhs; recognized with 2× Tech Obsession Award and Extreme Ownership Award.
- Optimized PostgreSQL queries, indexes, and Sidekiq background jobs across the Reimbursement module REST APIs, cutting dashboard load time by ~50% under high-volume async workloads.
- Built AI HealthBuddy for automated health report analysis and personalized user nudges; remediated a CSV import IDOR vulnerability and refactored CashlessFilter with JOIN, caching, and memoization; followed TDD-first development to ship 40+ production features with cross-functional teams.

YOUR-SPACE

Delhi, India

Software Engineer — Ruby on Rails October 2023 – December 2024

- Designed scalable relational database schemas and data models, improving query performance by 35% and supporting 10,000+ active users.
- Engineered a high-performance Ruby on Rails backend handling 25,000+ daily API requests across mobile app, website, and CRM platforms with 99.9% uptime; reduced server load by 30% and improved response times by 25%.
- Developed and integrated microservices, increasing data consistency and reducing inter-service communication errors by 25%.
- Deployed Rails backend to AWS using Capistrano, cutting deployment time by 40% and optimizing AWS resources to absorb a 20% increase in user traffic.
- Built server-side rendered Next.js applications, improving page load times by 30% and lifting user engagement by 15% through dynamic interfaces.
- Set up Metabase reporting and analytics, automating 50+ SQL queries that surfaced actionable insights and improved operational efficiency by 20%.

Peepoye Network

Remote

Full Stack Engineer (Ruby on Rails, React) June 2023 – October 2023

- Built an opinion trading platform with custom CMS, user authentication, and live vote counts using Ruby on Rails and React.
- Migrated the official website from WordPress to Next.js, achieving 80% faster page load times.
- Reduced bounce rate by 50% and grew daily traffic to 10,000 users through UX improvements and SEO optimization.

Microverse

Remote

Code Reviewer (Ruby on Rails, React) November 2022 – June 2023

- Mentored junior developers through detailed code reviews on Ruby on Rails and React projects, raising overall code quality across cohorts.
- Proposed improvements to code organization, architecture, and Git workflow to improve maintainability and review throughput.
- Coached peers on motivation, collaboration, and program longevity, supporting cohort retention.

Huawei Technologies

Gurgaon, India

Design Engineer February 2021 – October 2022

- Led a 21-member project team to successful delivery, earning a formal client appreciation letter.

- Awarded 2× Star Bean Awards for sustaining 96% customer satisfaction over two consecutive quarters.

PROJECTS

Sadhak AI — github.com/rbhatt1999/sadhak-ai

Python, Flask, LangChain, Google Gemini, PostgreSQL, OAuth 2.0, SSE

- Built a multi-user AI chat application with Google OAuth (Authlib + Flask-Login), integrating Google Gemini LLMs through LangChain with Pydantic-based structured outputs.
- Implemented rolling conversation summarization to manage LLM context-window limits — dynamically condensing chat history once token usage crosses a configurable threshold while preserving recent verbatim turns.
- Streamed assistant replies to the frontend over Server-Sent Events (SSE) and persisted per-user session history in PostgreSQL via SQLAlchemy 2 and LangChain's SQLChatMessageHistory; exposed REST endpoints for sessions, messages, and generation.

EDUCATION

Chandigarh University

Punjab, India

Bachelor of Computer Applications (BCA) July 2021 – July 2024

- Core coursework in data structures, algorithms, software engineering, computer architecture, and database systems.
- Programming foundations in C, Java, and Python.

Microverse

Remote

Full Stack Web Development Program (Full-Time) October 2022 – June 2023

- Completed 1,300+ hours mastering algorithms, data structures, and full-stack development with Ruby, Rails, JavaScript, React, and Redux.
- Practiced remote pair programming, industry-standard git-flow, and daily standups with international developers.

AWARDS & RECOGNITION

- **Tech Obsession Award (2×)** — ekincare, for high-impact ledger audit and cost-saving fixes worth multiple lakhs.
- **Extreme Ownership Award** — ekincare, for end-to-end ownership of production AI features.
- **Star Bean Award (2×)** — Huawei Technologies, for sustaining 96% customer satisfaction across two consecutive quarters.
- **Client Appreciation Letter** — Huawei Technologies, for leading a 21-member project team to successful delivery.
